Evenlode Global Dividend Fund (“the Fund”)

Class X Income EUR Shares
This is a sub fund of Evenlode ICAV, an Irish collective asset management vehicle.
ISIN: IE00BG5NF440
Equity Trustees Fund Services (Ireland) Limited is the manager of the ICAV.

Objectives and investment policy

The investment objective of the Fund is to provide long-term total returns with an emphasis on income. The Fund will invest predominantly in equity securities of companies listed on exchanges in Recognised Markets, with the balance invested in cash (or near cash securities, including highly liquid securities consisting of certificates of deposits, and government and public securities with a maturity of less than one year), up to 10% in Collective Investment Schemes that are established as UCITS and eligible under the Regulations, and in derivatives for the purpose of efficient portfolio management from time to time. It is not intended that the Fund will hold more than 5% of its Net Asset Value in cash except in exceptional circumstances. The Fund aims to invest in a focused portfolio of shares offering a combination of high and growing cash-flows (to deliver both capital growth and dividend growth for the Fund) and low business risk. Investments in emerging markets generally will not exceed 10% of the Fund's total assets.

Risk and reward profile

The Risk and Reward Indicator table demonstrates where the Fund ranks in terms of its potential risk and reward. The higher the rank the greater the potential reward but the greater the risk of losing money. It is based on past data, may change over time and may not be a reliable indication of the future risk profile of the Fund. The shaded area in the table below shows the Fund's ranking on the Risk and Reward Indicator.

- This Fund is ranked at 5 because funds of this type have experienced medium to high rises and falls in value in the past. Please note that even the lowest risk class can lose you money and that extreme market circumstances can mean you suffer severe losses in all cases. The indicator does not take into account the following risks of investing in this Fund:
- Investing overseas can bring additional returns and spread risk to different markets. There are risks, however, that changes in currency exchange rates may cause the value of your investment to decrease and increase.
- The Fund can use derivatives in order to protect from price and currency movements. This may result in gains or losses that are greater than the original amount invested.
- In difficult market conditions, the value of some investments may be less predictable than normal and the Fund may not be able to buy and sell these investments at the best time or at a fair price. This could affect the Fund's performance, potentially reducing your returns.
- **MSCI All Country World Index net** means a free float-adjusted market capitalisation weighted index that is designed to measure the equity market performance of developed and emerging markets.
- For further risk information please see the Prospectus and the Fund Supplement.
